

# Syspeace WordPress Reporter

## What is the Syspeace WordPress Reporter?

Syspeace WordPress Reporter is used to collect relevant login data from your WordPress pages login functionality. The collected data is sent to the Syspeace Web Detector which provides Syspeace with login attempt information. This means that for the WordPress Reporter to work you must have the Web Detector installed in Syspeace.

To prevent other websites running on the same server from sending login reports a Reporting Token is used in the Web Detector Reporter. A reporting token is a password-like feature that is set in Syspeace settings and that value needs to correspond with the reporting token sent by the Web Detector Reporter. Unless they match, the login report is ignored in Syspeace.

## How to install the Syspeace Web Detector PHP Reporter

To install:

1. Install the plugin by one of the following methods:
  - a. Put the SyspeaceWordpressReporter.php file in wp-content/plugins/  
OR
  - b. Go to the plugin tab of the WordPress admin panel, click Add New and choose Upload, choose the SyspeaceWordpressReporter.zip file and then click Install Now
2. Activate the plugin by going to the plugin tab of the WordPress admin panel, selecting the Syspeace WordPress Reporter plugin and clicking Activate.
3. Go to the Syspeace Reporter Settings tab that has been added to your admin panel.
4. Set Reporting Token to the Reporting Token set in Syspeace's settings
5. Set Website to the name of the website
6. Click Update

## How to use the Syspeace WordPress Reporter

To use the WordPress Reporter, simply go to Syspeace Reporter Settings and set Reporter Token to the Reporting Token set in Syspeaces settings and set Website to the site name you want in the log file.

Once you have implemented the plugin on your website we suggest that you test it by making both failed and successful login attempts. You can then verify if the login attempts are recorded by checking the Syspeace Access Log under Settings -> Access Log in Syspeace.

## What the Syspeace Web Detector PHP Reporter requires

You will be required to install a Web Detector Provider in Syspeace as mentioned under *What is Syspeace WordPress Reporter*.
